Dictionary

Create a Multilingual Dictionary

Project description

We will create a multilingual dictionary where users can add word translations to a dictionary and thereby create an open source multilingual dictionary.

Team

I think 1-2 others would be good. So, a team of 2-3 people.

SQL

I would think MySQL would be a good one to use.

No-SQL

I would guess that key-value pairs would be the best No-SQL but open for discussion

Business

We want as many users to participate as possible to create the best possible dictionary. Therefore, it will be free to use on a consumer level. There will be some charge for companies to integrate into their products.

Legal

The business will be a Utah LLC.

Technical

Our priorities will be:

1. Choose the languages we are going to include initially
2. Choose an initial SQL database for a prototype
3. Choose necessary programming languages
4. Implement the dictionary
